

GEORGIA, USA

Microsoft commitments

CARBON

Microsoft pledged to become carbon negative by 2030 and remove historical carbon since its 1975 founding by 2050. Microsoft will reduce Scope 1 and 2 emissions to near zero through energy efficiency work and by reaching **100 percent renewable energy supply by 2025.**

Microsoft has also committed by 2030 to:

- Be free of diesel
- Match 100 percent of electricity consumption, 100 percent of the time, with zero-carbon energy purchases
- Reduce our Scope 3 emissions by more than half

WATER

In 2020, Microsoft pledged to be water positive for our direct operations by 2030.

Through this commitment, we will replenish the water consumed by datacenter operations in water-stressed regions. We have also committed to **reduce water waste by 95 percent in our datacenter operations by 2024.**

WASTE

In 2020, Microsoft announced enhanced goals for waste reduction, circular supply chains, and zero-waste certification. We are working towards our goal of **90 percent reuse of servers and components by 2025** through our first-of-a-kind Microsoft Circular Centers.

Microsoft is using **circular economy** principles in our datacenters by implementing reuse and comprehensive recycling programs.

ECOSYSTEMS

Microsoft has committed to **protecting more land than we use for direct operations by 2025.**

Microsoft is committed to community investment, pollution remediation, and fair economic inclusion initiatives, as well as investment in clean energy, broadband access, and water replenishment initiatives.

By 2030, Microsoft datacenters will be zero waste

Georgia, USA

As more people and businesses rely upon technology to stay connected, informed, and productive, digital needs in Atlanta and around the globe are growing—and that means the need for datacenters is growing, too.

The Microsoft Cloud offers customers an energy-efficient and carbon-neutral alternative to running their own private datacenters. [Research](#) shows that Microsoft Cloud services can be up to 93 percent more energy efficient than traditional enterprise datacenters.

We're committed to providing a sustainable Microsoft Cloud, so we wanted to share information about how we take responsibility for our datacenter operations.

For Microsoft datacenters located in Atlanta, Georgia, in the East US 3 region, we have included local sustainability investments and datapoints in support of meeting and exceeding our commitments around carbon, water, waste, and ecosystems.

Published March 2023. This document shares information we have as of the publication date, and it includes estimated information and projections. The information is provided as-is and may change without notice.

Local sustainability investments

CARBON

1.12

Design power usage effectiveness (PUE)

Not yet in operation

8%

Renewable energy coverage
approximate energy procured through
June 2022

Leadership in Energy and Environmental Design (LEED) is the world's largest green building certification program. LEED certification is a globally recognized symbol of sustainability achievement and leadership.

New Microsoft datacenters are designed to earn **LEED Gold certification**.

[Learn about PUE](#)

WATER

0.060 $\frac{\text{L}}{\text{kWh}}$

Design water usage effectiveness (WUE)

Not yet in operation

Microsoft will use **adiabatic cooling** at our Atlanta datacenter.

These datacenters use **outside air and zero water** when temperatures are below 29.4 degrees Celsius, **reducing cooling water use to less than 15 percent of the year**.

[Learn about WUE](#)

WASTE

Microsoft Circular Centers can process up to

3,000

servers per month for reuse.

It takes five to six years from when a datacenter is operational to generate reusable assets. Once servers are ready to be decommissioned in this region, Microsoft is planning to open a **Georgia Circular Center**.

Globally, Microsoft datacenters **reuse 78 percent** of our end-of-life assets and components.

COMMUNITY

Since 2020, Microsoft has invested in over

13

projects across the communities of East Point, Douglasville, and Palmetto.

We're supporting the Finding the Flint River project

Microsoft is partnering with the Conservation Fund to support the Finding the Flint River project. Finding the Flint is a restoration and conservation project for Georgia's historic Flint River. This project will restore the natural state of the river's headwaters, enable access to the river, and create a nature park to connect the datacenter community to this greenspace.

Achieving your sustainability goals

Microsoft Azure enables operational agility, performance, efficiency, and sustainability so you can reduce your company's water usage, waste output, and carbon footprint—all while improving productivity and cost efficiency.

Microsoft Emissions Impact Dashboard

The Microsoft Emissions Impact Dashboard helps to quantify the impact of Microsoft Cloud services on your environmental footprint, factoring in Microsoft's Scope 1, 2, and 3 emissions as well as the efficiency of your on-premises environments.

Microsoft Cloud for Sustainability

The Microsoft Cloud for Sustainability allows you to more easily and effectively record, report, and reduce your emissions on a path to net zero. It integrates previously disparate solutions into a new system of record that delivers all the data you need to manage your business today while you transform.
