

NEW ZEALAND

Microsoft commitments

CARBON

Microsoft pledged to become carbon negative by 2030 and remove historical carbon since its 1975 founding by 2050. Microsoft will reduce Scope 1 and 2 emissions to near zero through energy efficiency work and by reaching **100 percent renewable energy supply by 2025.**

Microsoft has also committed by 2030 to:

- Be free of diesel
- Match 100 percent of electricity consumption, 100 percent of the time, with zero-carbon energy purchases
- Reduce our Scope 3 emissions by more than half

WATER

In 2020, Microsoft pledged to be water positive for our direct operations by 2030.

Through this commitment, we will replenish the water consumed by datacenter operations in water-stressed regions. We have also committed to **reduce water waste by 95 percent in our datacenter operations by 2024.**

WASTE

In 2020, Microsoft announced enhanced goals for waste reduction, circular supply chains, and zero-waste certification. We are working towards our goal of **90 percent reuse of servers and components by 2025** through our first-of-a-kind Microsoft Circular Centers.

Microsoft is using **circular economy** principles in our datacenters by implementing reuse and comprehensive recycling programs.

ECOSYSTEMS

Microsoft has committed to **protecting more land than we use for direct operations by 2025.**

Microsoft is committed to community investment, pollution remediation, and fair economic inclusion initiatives, as well as investment in clean energy, broadband access, and water replenishment initiatives.

By 2030, Microsoft datacenters will be zero waste

New Zealand

As more people and businesses rely upon technology to stay connected, informed, and productive, digital needs in New Zealand and around the globe are growing—and that means the need for datacenters is growing, too.

The Microsoft Cloud offers customers an energy-efficient and carbon-neutral alternative to running their own private datacenters. [Research](#) shows that Microsoft Cloud services can be up to 93 percent more energy efficient than traditional enterprise datacenters.

We're committed to providing a sustainable Microsoft Cloud, so we wanted to share information about how we take responsibility for our datacenter operations.

For Microsoft datacenters located in Auckland, New Zealand, in the New Zealand North region, we have included local sustainability investments and datapoints in support of meeting and exceeding our commitments around carbon, water, waste, and ecosystems.

Published March 2023. This document shares information we have as of the publication date, and it includes estimated information and projections. The information is provided as-is and may change without notice.

Local sustainability investments

CARBON

Design power usage effectiveness (PUE)
Not yet in operation

In New Zealand, we plan to **power our backup generators with a renewable biofuel blend that reduces net carbon emissions.**

New Microsoft datacenters are designed to earn **LEED Gold certification.**

Microsoft operations in New Zealand will comply with applicable air quality requirements.

[Learn about PUE](#)

WATER

Design water usage effectiveness (WUE)
Not yet in operation

Microsoft's New Zealand datacenters will be cooled using **outside air only**, requiring **zero water for cooling and humidification.**

[Learn about WUE](#)

WASTE

Globally, Microsoft datacenters reuse

of our end-of-life assets and components. **The remaining 22 percent of materials are recycled.**

Additionally, Microsoft is conducting research and development to **improve waste diversion by determining new recycling solutions for used air filters and fiber optic cables.**

COMMUNITY

We're supporting the evolution of Platforms for Good.

Using the power of the Microsoft Cloud, app developer Platforms for Good created a range of platforms that are connecting caregivers and Kiwis in a nationwide digital community. And global expansion is already underway—in just six years, more than

workers have signed up on the platform.

We're also supporting new opportunities for Māori and Pacific peoples.

To address the lack of diversity in the IT workforce in New Zealand, specifically for the Maori People, Microsoft is partnering with TupuToa to equip Maori and Pacific peoples with confidence and digital skills. The initiative, HikoHiko Te Uira, provides digital training in cloud computing, data analytics, and Microsoft programs like the Microsoft 365 suite.

Achieving your sustainability goals

Microsoft Azure enables operational agility, performance, efficiency, and sustainability so you can reduce your company's water usage, waste output, and carbon footprint—all while improving productivity and cost efficiency.

Microsoft Emissions Impact Dashboard

The Microsoft Emissions Impact Dashboard helps to quantify the impact of Microsoft Cloud services on your environmental footprint, factoring in Microsoft's Scope 1, 2, and 3 emissions as well as the efficiency of your on-premises environments.

Microsoft Cloud for Sustainability

The Microsoft Cloud for Sustainability allows you to more easily and effectively record, report, and reduce your emissions on a path to net zero. It integrates previously disparate solutions into a new system of record that delivers all the data you need to manage your business today while you transform.
