

Independent Accountants' Review Report

The Board of Directors and Shareholders of Amazon.com, Inc.

We have reviewed Amazon.com, Inc.'s (Amazon) accompanying schedule of select sustainability indicators (the Subject Matter) included in **Appendix A** for the year ended December 31, 2025, in accordance with the criteria also set forth in **Appendix A** (the Criteria). Amazon's management is responsible for the Subject Matter in accordance with the Criteria. Our responsibility is to express a conclusion on the Subject Matter based on our review.

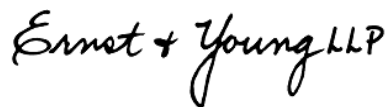

Our review was conducted in accordance with attestation standards established by the American Institute of Certified Public Accountants (AICPA) AT-C section 105, *Concepts Common to All Attestation Engagements*, and AT-C section 210, *Review Engagements*. Those standards require that we plan and perform our review to obtain limited assurance about whether any material modifications should be made to the Subject Matter in order for it to be in accordance with the Criteria. The procedures performed in a review vary in nature and timing from and are substantially less in extent than, an examination, the objective of which is to obtain reasonable assurance about whether the Subject Matter is in accordance with the Criteria, in all material respects, in order to express an opinion. Accordingly, we do not express such an opinion. Because of the limited nature of the engagement, the level of assurance obtained in a review is substantially lower than the assurance that would have been obtained had an examination been performed. As such, a review does not provide assurance that we became aware of all significant matters that would be disclosed in an examination. We believe that the review evidence obtained is sufficient and appropriate to provide a reasonable basis for our conclusion.

We are required to be independent of Amazon and to meet our other ethical responsibilities, in accordance with the relevant ethical requirements related to our review engagement.

The procedures we performed were based on our professional judgment. Our review consisted principally of applying analytical procedures, making inquiries of persons responsible for the subject matter, obtaining an understanding of the data management systems and processes used to generate, aggregate and report the Subject Matter and performing such other procedures as we considered necessary in the circumstances.

As described in **Appendix A**, the Subject Matter is subject to measurement uncertainties resulting from limitations inherent in the nature and the methods used for determining such data. The selection of different but acceptable measurement techniques can result in materially different measurements. The precision of different measurement techniques may also vary.

Based on our review, we are not aware of any material modifications that should be made to the accompanying schedule of select sustainability indicators, included in Appendix A, for the year ended December 31, 2025, in order for it to be in accordance with the Criteria.

May 21, 2026

Appendix A:

Subject Matter	
The total Environmental Attribute Certificates (EACs) for Sustainable Aviation Fuels, Agriculture, Sustainable Marine Fuels, and Renewable Diesel certificates claimed by Amazon for the year ending December 31, 2025:	
Certificate Types	Reported Value (in mtCO ₂ e) ^{1,2}
Sustainable Aviation Fuel	111,700
Agriculture	17,700
Sustainable Marine Fuel	63,000
Renewable Diesel	7,000
Total	199,400

¹ The disclosed values in this report are calculated based on a combination of actual activity data and estimated activity data using reasonably available information. The disclosed values are subject to measurement uncertainties resulting from limitations inherent in the nature and the methods used for determining such data. The selection of different but acceptable measurement techniques can result in materially different measurements. The precision of different measurement techniques may also vary.

² Reported values are denoted in metric tons of carbon dioxide equivalent (mtCO₂e).

Criteria

Amazon defines an EAC as an instrument that conveys the environmental or sustainability attributes associated with commodities, activities, or projects. Once Amazon claims an EAC, the associated certificate attributes are reported in Amazon's sustainability report one time in the respective year. Projects include investments in carbon abatement methods either within Amazon's operations or value chain, or relevant to Amazon's operations and value chain. These include initiatives categorized as follows:

1. Sustainable Aviation Fuel certificates – Amazon purchases attribute certificates for alternative aviation fuels, such as fuel produced from used cooking oil and animal fat/beef tallow. The certificates represent the reduction in greenhouse gas emissions resulting from the use of alternate fuels compared to conventional fuels. Each certificate is verified by an accredited third-party organization.
2. Agriculture certificates – Amazon invests in various agricultural interventions and technologies, including manure management practices to reduce manure-related emissions (focusing on reducing the associated methane-producing bacteria or minimizing methane emissions through a controlled storage environment), enteric emission reduction through feed additives for livestock, and renewable diesel applications for farm equipment. These interventions target key sources of agricultural greenhouse gas emissions through improved farming practices and alternative technologies. The certificates issued represent the quantified reduction in emissions through these interventions compared to conventional agricultural practices. Each certificate is verified by an accredited third-party organization.
3. Sustainable Marine Fuel certificates – Amazon purchases attribute certificates for alternative marine fuels, such as biofuel produced from used cooking oil or biomethane produced from organic materials in agriculture or waste sectors. The certificates represent the reduction in greenhouse gas emissions resulting from the use of alternate fuels compared to conventional fuels. Each certificate is verified by an accredited third-party organization.
4. Renewable Diesel certificates – Amazon purchases attribute certificates for alternative on-road fuels. The certificates represent the reduction in greenhouse gas emissions resulting from the use of alternate fuels compared to conventional fuels. Each certificate is verified by an accredited third-party organization.

All EACs claimed by Amazon:

1. Are exclusively owned by Amazon;
2. Are uniquely identifiable;
3. Have been received by Amazon;
4. Represent carbon abatement values that have been achieved; and
5. Were issued by respective EAC providers either within the 12-month reporting period, two years immediately preceding the reporting period, or six months immediately following the reporting period.
